

## ORANGE COUNTY CBC JANUARY 1, 2010

Compiler: Ken Sztraky

The Orange County CBC was held as usual on January 1 without any real weather issues.

As with many other counts in the area this year, waterfowl were scarce. Snow Geese were in the lowest numbers in several years, and there were no Red-breasted Mergansers seen. On the other hand, Great and Snowy Egrets were found in high numbers.

A large number of Ospreys were seen, but it will always be difficult to know if any were sightings were duplicated or were re-sightings of the same bird(s).

Beach bird habitat is scarce within the count circle, with only a few areas along the mouth of the Neches and in the Old River Cover that offer much of a chance of seeing the "true" shorebirds. This year, no Black-bellied Plovers were seen, but American Avocet, not often found on this count even though the species is present virtually year round in the south impoundment of nearby Pleasure Island, was seen. A Lesser Black-backed Gull was also unusual.

White-winged Doves were seen again after several years absence. This is another species that has always been plentiful in areas quite close to the circle.

There was good evidence that the area was recovering from the effects of Hurricane Ike in that Red-headed Woodpeckers were back again and Brown Creeper and Brown-headed Nuthatches were seen for the first time in a few years. Brown Thrasher numbers were very low, as were Gray Catbirds, suggesting the underbrush may not have fully regenerated. Blue-gray Gnatcatchers and Ruby-crowned Kinglets – mid storey species – were seen in high numbers.
